

WEBRU STAAL B.V.

Steel Construction
Roof and Wall Cladding
Premises and Shell building

WEBRU STAAL

Partner for delivering all types of buildings / industrial buildings.

WEBRU STAAL

Webru Staal B.V. was established at the end of the 70s as a steel construction company. Since then, Webru has grown into a high-quality, versatile and popular building partner.

From steel constructions...

...roof lighting, cladding to roof covering

Webru, a part of the ProFerro Group, stands out in its sector because it is able to offer a full package for the entire construction process. Its experience and ambition has allowed the company to increase its range of services enormously and to also offer its clients turnkey projects.

VERSATILE

Overt the years, the service package has increasingly evolved into a total package: from delivering complete commercial premises up to customized work for private individuals. Roof & wall cladding, roof covering, roof lighting, doors, overhead doors, frames, and fire-resistant / fire-retardant materials are part of our product line. Webru guarantees quality in all areas because we manage all the aspects of the production process.

QUALITY

Webru is known to be a versatile enterprise. We manage our own engineering, production and assembly processes in-house. This guarantees a tight and transparent progression of the building process. The result is strict adherence to the schedule and guarantee of quality.

RELIABLE

Webru has built itself a trustworthy name. By combining quality and safety, Webru automatically produces reliable products. In addition to the product, Webru believes in the trustworthy cooperation between people and companies. That is why our employees do what they promise and meet their commitments. In the course of the years, our reputation has reached increasingly larger sectors in the Netherlands. The result is an increase in many excellent contacts and projects throughout the Netherlands.

SAFETY

In addition to versatility and reliability, Webru focuses all its attention on another important pillar: quality and safety. Our motto in Dutch is 'Webru Staal Gestaalde Perfectie', which means that every effort is made to achieve perfection in steelwork. This is shaped by taking revolutionary steps, thinking along with the client in finding constructive solutions, suggesting alternatives and carrying out what was agreed. Most of our regular clients appreciate this approach and – above all – value the skilled professionals that work for Webru.

SERVICES

Webru offers a large number of services that can be used modularly. Designing and turnkey delivering, supplying the drawings, or executing only certain parts of the building process: The client decides on the services that are made use of per project.

DESIGNING COMMERCIAL BUILDINGS

Webru's draughtsmen use Tekla Structures, a modelling program for constructional engineering. All constructions are designed up to the last detail using this software and are drawn up three-dimensionally. The high- quality 3D models made by this software are very reliable and faultless. This ensures an almost error-free exchange between the drawing office and the CNC-driven machines.

BIM

Webru has years of experience with modelling using the Building Information Model (BIM) i.e. the Tekla models. Collaborating with clients and building partners in a model saves costs, because errors can be discovered in time and can be adjusted if necessary, before even starting the production of a component. In 2011, Webru's draughtsmen have won the Tekla BIM Award – Benelux in the segment BIM – Contractors – Engineers.

*Project, mounting
and more*

PRODUCING AND ASSEMBLING

As soon as a construction is designed and modelled, Tekla Structures generates well-organized lists and clear workshop drawings. Using these lists, steel and other components are purchased from a number of regular suppliers. The good contacts Webru maintains with these suppliers ensure excellent value for money.

PRODUCTION

The workshop drawings are used in producing the steel. The delivered material is cut to size, welded and processed by the professional and highly trained Webru staff.

PRESERVATION

As soon as all the steel for a project is ready, it is preserved by either hot-dip galvanizing, powder coating, wet painting the steel, or a combination of these using the duplex system. Specialized companies with whom Webru has maintained good contact for years carry out these activities. Our own trucks transport the steel, which guarantees a strict adherence to the schedule.

MOUNTING

After production and preservation, our professionally trained and well-equipped teams are ready to mount the construction in a safe, quick and professional manner. Appointing a single, permanent project manager to each client ensures an unambiguous and accessible contact, which results in good communication and reliable cooperation.

PARAPETS

Webru frequently delivers the initial foundation setup for cladding in the form of concrete elements, which can be produced insulated or non-insulated.

ROOF & WALL CLADDING

A commercial building is the first impression that customers and new clients get of a company. Webru offers a wide range of roof & wall cladding and sandwich panels for new and existing buildings in many different types and colours. We have something suitable for every company. If a building receives roof or wall cladding, then Webru is also able to supply the proper insulation.

ROOF COVERING

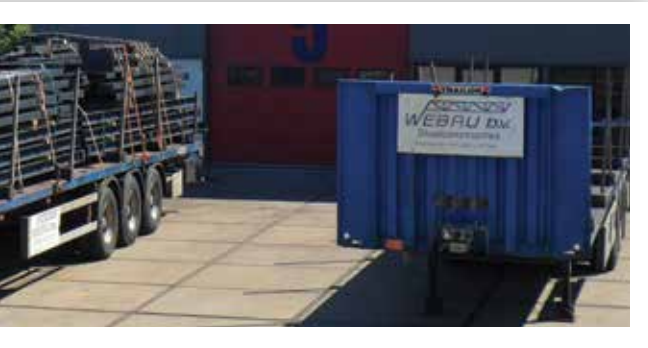

Many commercial buildings have flat roofs that have to withstand the weather conditions in a certain region. This can demand high quality coverings. Professional knowledge, materials and the companies with which Webru cooperates offer the quality that withstands the harshest conditions.

ROOF LIGHTING

Natural light contributes to a good workstation. That is why roof lighting is built into roofs. Webru supplies and mounts this roof lighting in existing and new buildings. The roof lighting are always measured and customized to coordinate with the building and to guarantee quality.

OVERHEAD, ROLLING & SLIDING DOORS

Many companies require large doors so that trucks and products can be transported easily and quickly. Webru supplies these doors for new and existing buildings. Each door is tailor-made and can meet every wish due to its added options.

WICKETS AND FRAMES

Webru delivers customized wickets and frames to ensure efficient passage in and around commercial premises. Doors and frames supplied by Webru have a long lifespan and are maintenance-friendly, colourfast, etc.

FIRE-RESISTANT MATERIALS

Webru supplies commercial premises with fire-resistant materials for optimum and required safety. This could be an additional fire-resistant coat, fire-retardant doors or fire-resistant walls.

SMALL STEEL ITEMS FOR INDIVIDUALS & SMALL PROJECTS

In addition to complex and large buildings, Webru also delivers and/or mounts items for individuals & small projects. Advice, customized work, quick delivery and – of course – quality and competitive prices are the core focal points. Webru always has stock of frequently used sections, which can be processed, delivered or picked up immediately.

SUB-CONTRACTORS, BUILDING FRAMES AND TURNKEY

Webru is also a skilled partner in turnkey building and building frames. The client's requirements are always our core focal points. Good communication is important as well as clear agreements, compliance with these agreements, a fixed contact person, and good accessibility. That is why we attach great value to all this during the entire project.
